Meet the Family

Queen Bee

There is only one queen bee in a colony. She will live one to three years before the hive replaces her.

Drone Bee

The Drone Bee is the boy bee of the hive and its only job is to mate with a new queen. There are 50 to 100 Drone Bees per colony and Drone Bees don't sting..

Worker Bee

There are around 70,000 worker bees in a colony and only live 6 weeks in the summer.

Honey

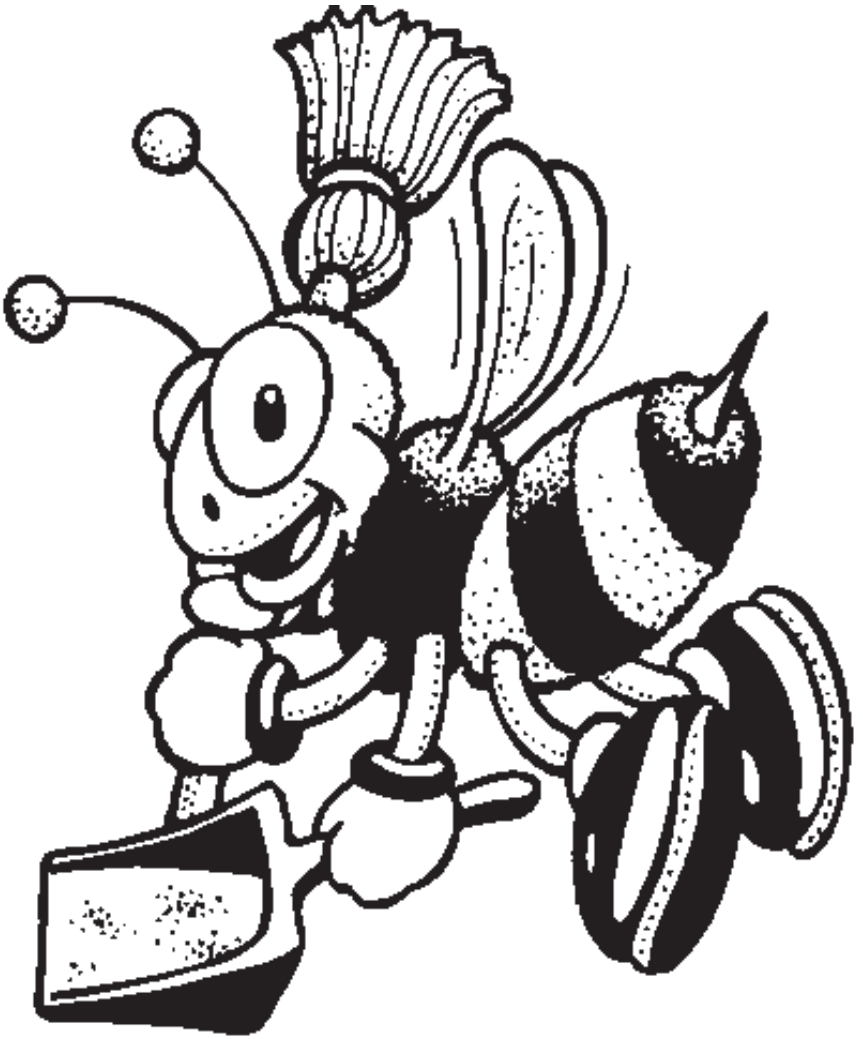

Honey Bees are the only insect to produce a food for mankind.

Foraging

Honey Bees travel over 55,000 miles and visit over 2 million flowers to make one pound of honey.

Housekeeping

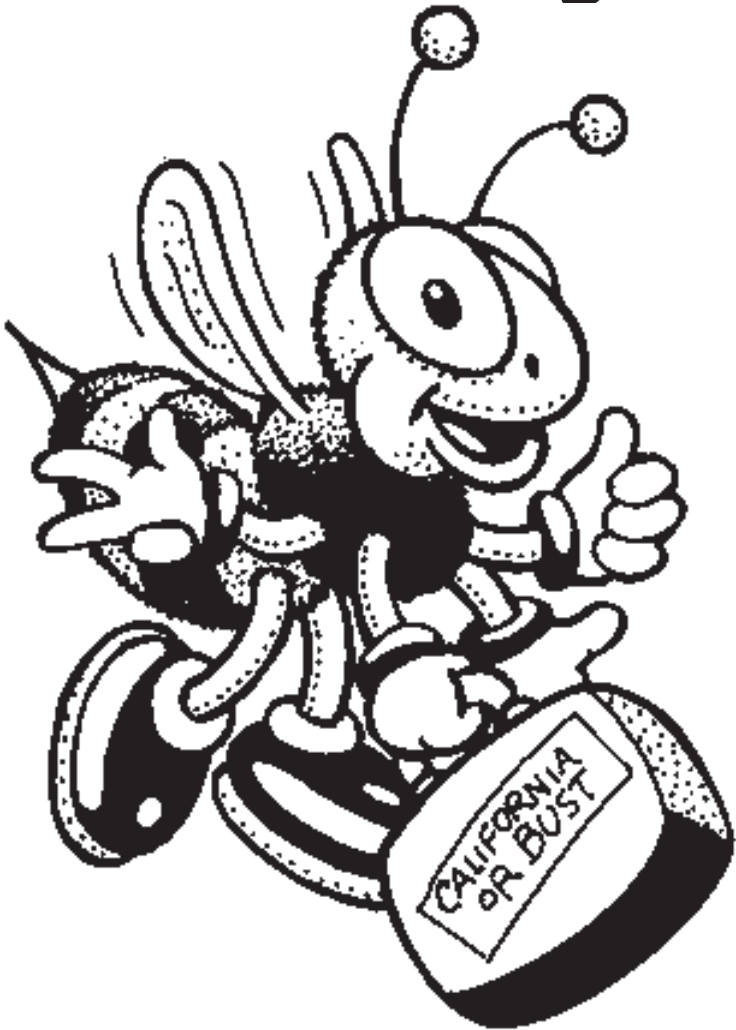

A Honey Bee spends $\frac{1}{3}$ of its life cleaning the hive and building comb to store the honey.

Nurse Bees

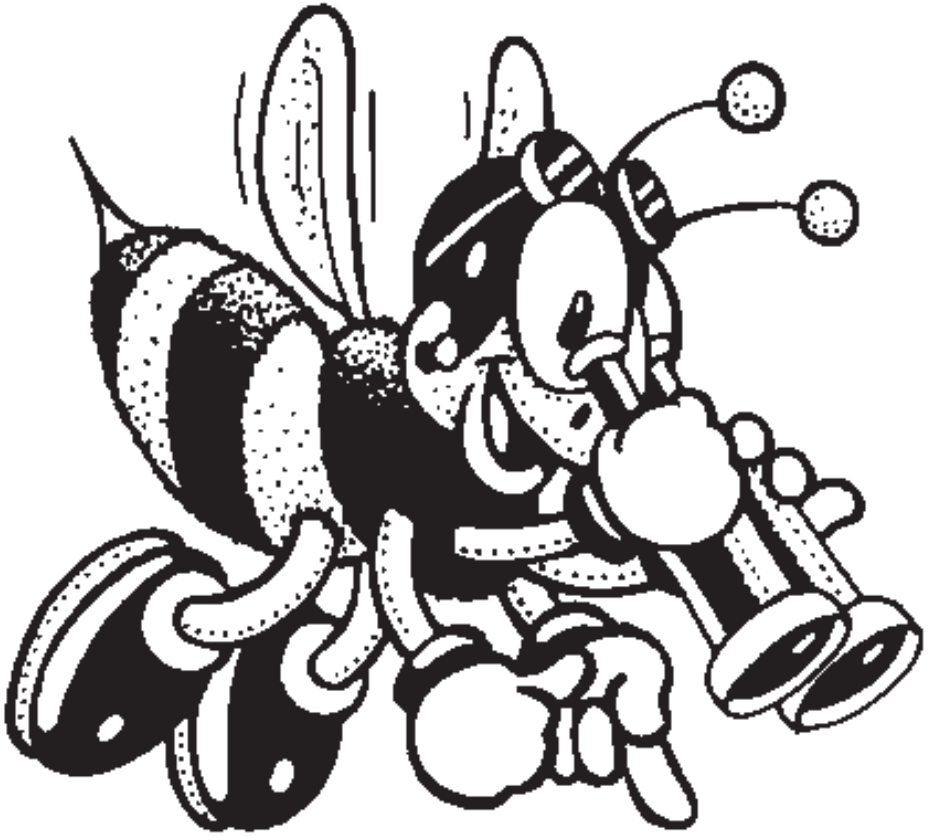

The first two weeks of a honey bees
life is spent caring for the bees
that are not born yet

Swarming

When a colony grows too large for the hive, half of the colony will leave with the queen and look for a new home. The bees left in the hive will make their own queen.

Bee Scouts

When a colony swarms, scout bees will look for a new home for the new colony to live..

Queen Bee

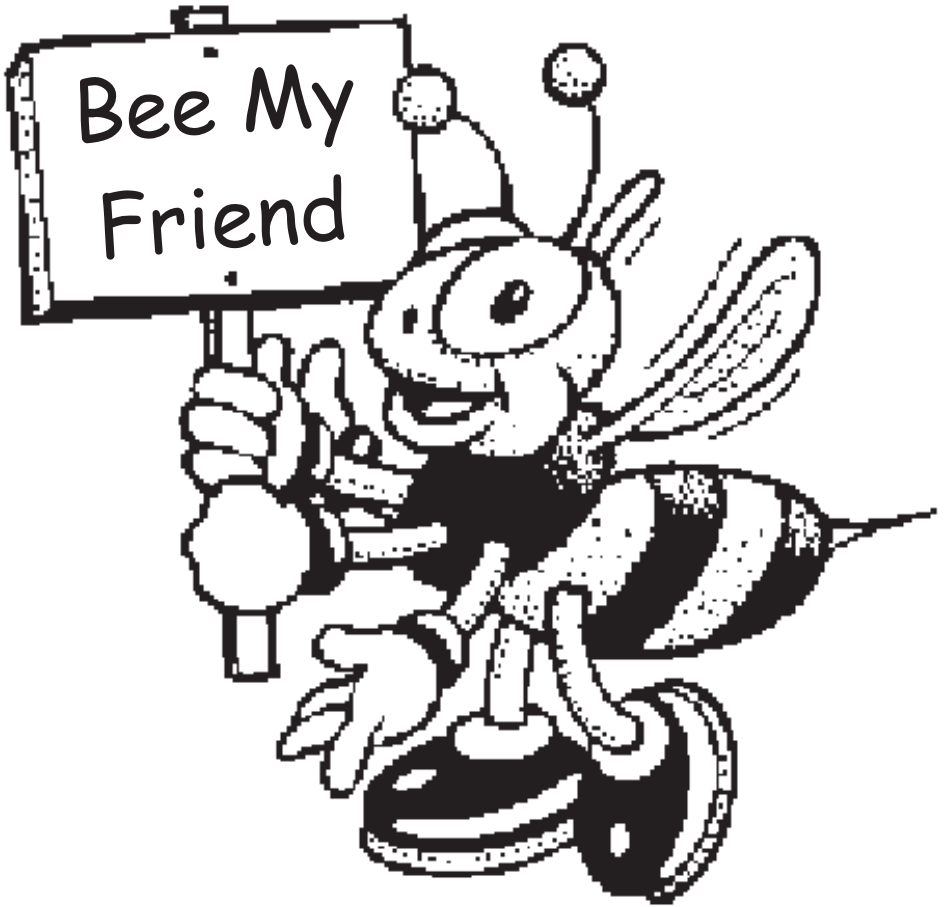

Queen Bees will lay over 2 million eggs in her lifetime. A Queen Bee only leaves the hive to mate or swarm.

Bees Wax

Bees wax is produced from the belly of a bee and is used to build comb for the queen to lay eggs and to store honey. Bees wax is used for candles, cosmetics & polishes

Good Bye !!!!

Honey bees will sting you if they feel you are going to hurt them. People often mistake a Yellow Jacket for a Honey Bee. A Yellow Jacket is considered a wasp.
